COMMUNITY BRIEF · IN SUPPORT OF $TOILET · 18 JULY 2026

TOILET & the BlueMove Exploit: A Community That Bought Back the Dip

A short, factual brief — every figure taken directly from Sui mainnet and Noodles. Nothing assumed.

> TOILET was one of hundreds of Sui tokens caught in the BlueMove exploit. Here, plainly, is what was lost, how the community responded, and the one thing still unresolved.

1 What was lost

TOILET bonded its launch liquidity on BlueMove's MovePump launchpad. When BlueMove's AMM was exploited on **11 July**, the SUI backing TOILET's bonded pool was drained along with ~394 other pools — and the pool was left unfrozen. On **17 July at 19:08 UTC**, an **arbitrage bot** bought **593,947,817 TOILET (~6% of supply) from the broken pool for just 0.5 SUI** and resold it into TOILET's live markets, briefly crushing the price to a 24-hour low of **$0.000000129**. The bonded pool now holds only ~8,954 TOILET — effectively empty.

Drained BlueMove pool	0x800be221…d4dd5e34
Arbitrage bot	0x98391d8f…da8748e

2 How the community responded — they bought it back

This is the part TOILET should be proud of. Rather than capitulate, holders stepped in and bought the dip straight back.

$0.000000129	$0.0000094	+13.82%
24h low — where the dump hit	bought back to — current price	last 6h, on community buying

TOILET is **+13.82% over the last 6 hours and +4.5% on the day** (Noodles). It still sits ~18% below a week ago, but the buy-back is real and it is on-chain.

3 What is still unresolved — the missing liquidity

The buy-back defends the price, but it does not replace what was taken. TOILET launched with **deep liquidity bonded on BlueMove — the anchor the token was built on** — and that liquidity was **drained in the exploit and has never been put back.** What trades today is only the lighter secondary liquidity around it; the foundational LP that was taken is still missing. **That gap — not the price — is the real, unfinished part of this story**, and rebuilding that depth is what returns TOILET to the strength it launched with.

Said calmly and without blame: this second hit was **preventable**. The first exploit was on **11 July**; the broken pools sat unfrozen, and the faucet draining that hit TOILET came **six days later, on 17 July**. The situation was known, and freezing the affected pools sooner would have closed the door before it was used again. It is a point the wider Sui ecosystem should take on board — for TOILET and for every other project caught the same way.

> **TOILET did what a strong community does — it held its ground and bought back its own chart. That deserves respect. We stand with the TOILET community, and we'll keep documenting these events on-chain, plainly and for everyone, so the whole ecosystem can see exactly what happened.**
